Website Documentation

Portfolio | MyShop E-Commerce | ArenaX Esports

Three static websites written in plain HTML5 and CSS3. This document describes the purpose, structure, design and behaviour of each page, and lists suggestions for improvement.

#	Project	File	Primary colour
1	Personal Portfolio	portfolio.html	Purple #4b2fd6
2	MyShop E-Commerce	ecart_website.html	Orange #ff6b00
3	ArenaX Esports	gaming_website.html	Gold #ffb400 on dark #0b0c10

1. Overview

All three projects are single-file websites. The CSS is embedded in a `<style>` block and there is no JavaScript, so every animation and hover effect comes from CSS alone. Emoji stand in for photos and icons, which means the pages need no image files and no internet connection.

Common techniques

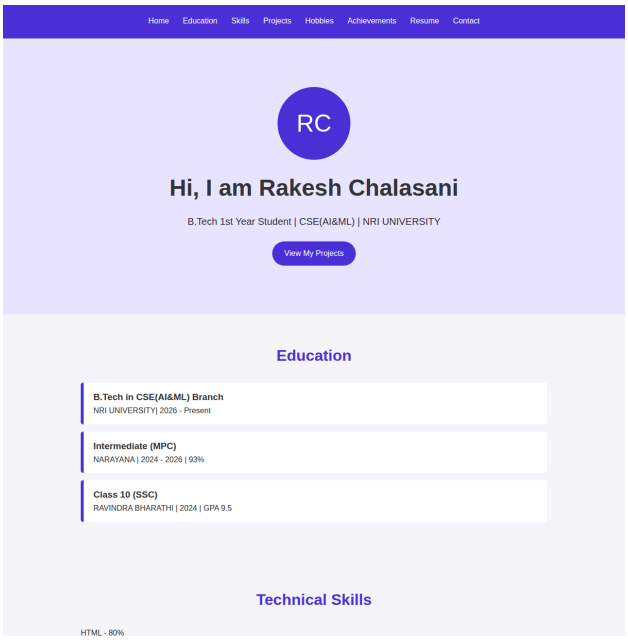

- **Reset:** `* { margin:0; padding:0; box-sizing:border-box }` on every page.
- **Smooth scrolling:** `html { scroll-behavior: smooth }` with in-page anchor links such as `#projects`.
- **Flexbox** for card grids, navigation bars and list rows; **wrap** is enabled so layouts reflow on narrow screens.
- **Transitions** (`transition: 0.3s`) for hover lift, scale and colour changes.
- **@keyframes** animations for fade-in, bounce, pulse, blink and bar growth.
- **Media queries** at 600 px (portfolio, MyShop) and 800 px (ArenaX) for mobile layouts.

Animation summary

Animation	Where used	Effect
fadeIn	Portfolio hero text; MyShop banner; ArenaX live banner	Opacity 0 to 1 over 2-3 s
bounce	Portfolio avatar	Moves up 15 px and back, repeating
grow	Portfolio skill bars; ArenaX player stat bars	Bar width expands from 0 to its value
pulse	MyShop "Shop Now"; ArenaX "VS"	Scales to 1.08x (MyShop) or 1.3x (ArenaX) and back
blink	ArenaX "LIVE NOW" tag	Opacity dips to 0.4 and returns

2. Portfolio Website

File: portfolio.html **Purpose:** A one-page personal portfolio for a first-year B.Tech CSE (AI & ML) student, presenting education, skills, projects, hobbies, achievements, a resume summary and contact details.

Top of the page at 1280 px width

Page structure

Section	ID	Content
Navigation	-	Sticky bar with 8 links in a purple strip; yellow underline on hover
Home	#home	Initials avatar "RC", name, course and university line, "View My Projects" button
Education	#education	Three entries: B.Tech (2026-present), Intermediate MPC (93%), Class 10 (GPA 9.5)
Skills	#skills	HTML 80%, CSS 70%, C 65%, Python 55% shown as progress bars
Projects	#projects	Portfolio Website, Calculator, Marks Manager
Hobbies	#hobbies	Gaming, Music, Cricket, Reading
Achievements	#achievements	School topper (9th class), Python course (2026), Science expo
Resume	#resume	Objective, education, skills and a download button
Contact	#contact	Email, phone, location, Email / GitHub / LinkedIn buttons
Footer	-	Copyright line

Design notes

- Palette: purple `#4b2fd6`, lavender hero `#e8e4ff`, page background `#f4f4f9`, hover accent coral `#ff6b5b`.
- Typeface: Arial. Content is centred in a 1000 px wide column.
- Cards (`.box`) are 280 px wide, wrap in a flex container and lift 8 px on hover.

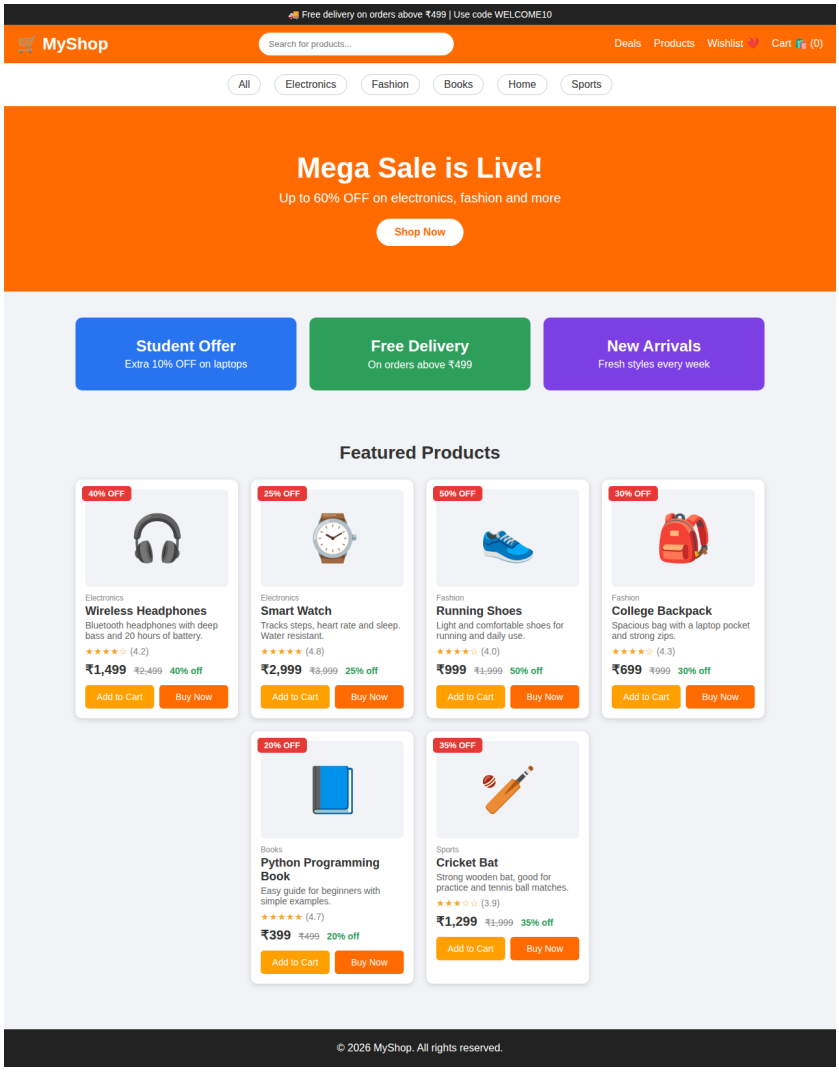

- List items (`.list-item`) have a 6 px purple left border and shift 15 px right on hover.
- On screens up to 600 px the heading shrinks to 32 px, nav links get smaller and cards become full width.

Issues and suggested fixes

- The "Send Email" link uses `href="rakeshchalasani407@gmail.com"`. It needs the `mailto:` prefix to open a mail app.
- "Download Resume" links to `resume.pdf`, which is not part of the upload. Place the file beside the HTML page.
- The footer says "Your Name" and should be replaced. GitHub and LinkedIn buttons point to the generic home pages.
- Achievement dates use square brackets (e.g. [2023]) that look like leftover placeholders.
- The skills bars use `<div>` without ARIA roles; adding `role="progressbar"` would help screen readers.
- The page contains a personal phone number and email address. Remove them if the file will be published publicly.

3. MyShop E-Commerce Website

File: ecart_website.html **Purpose:** A storefront home page in the style of Indian online marketplaces, with a sale banner, offers and six featured products priced in rupees.

Full page at 1280 px width

Page structure

Block	Content
Top strip	Dark bar: free delivery above Rs. 499, code WELCOME10
Navbar (sticky)	Logo, search input, Deals, Products, Wishlist, Cart (0) links
Category pills	All, Electronics, Fashion, Books, Home, Sports
Banner	"Mega Sale is Live!" with a pulsing "Shop Now" button
Promo tiles (#deals)	Student Offer (blue), Free Delivery (green), New Arrivals (purple)
Featured Products (#products)	Six product cards (see below)
Footer	Copyright line

Product catalogue

Product	Category	Price	Was	Off	Rating
Wireless Headphones	Electronics	Rs. 1,499	Rs. 2,499	40%	4.2
Smart Watch	Electronics	Rs. 2,999	Rs. 3,999	25%	4.8
Running Shoes	Fashion	Rs. 999	Rs. 1,999	50%	4.0
College Backpack	Fashion	Rs. 699	Rs. 999	30%	4.3
Python Programming Book	Books	Rs. 399	Rs. 499	20%	4.7
Cricket Bat	Sports	Rs. 1,299	Rs. 1,999	35%	3.9

Anatomy of a product card

- Red discount **badge** pinned to the top-left corner (`position:absolute` inside a `position:relative` card).
- Emoji **image** area, 150 px tall, that zooms 1.1x when the card is hovered.
- Category label, name, description, star rating (text stars) and the price row with old price struck through.
- **Add to Cart** (amber) and **Buy Now** (orange) buttons; both turn dark on hover.

Design notes

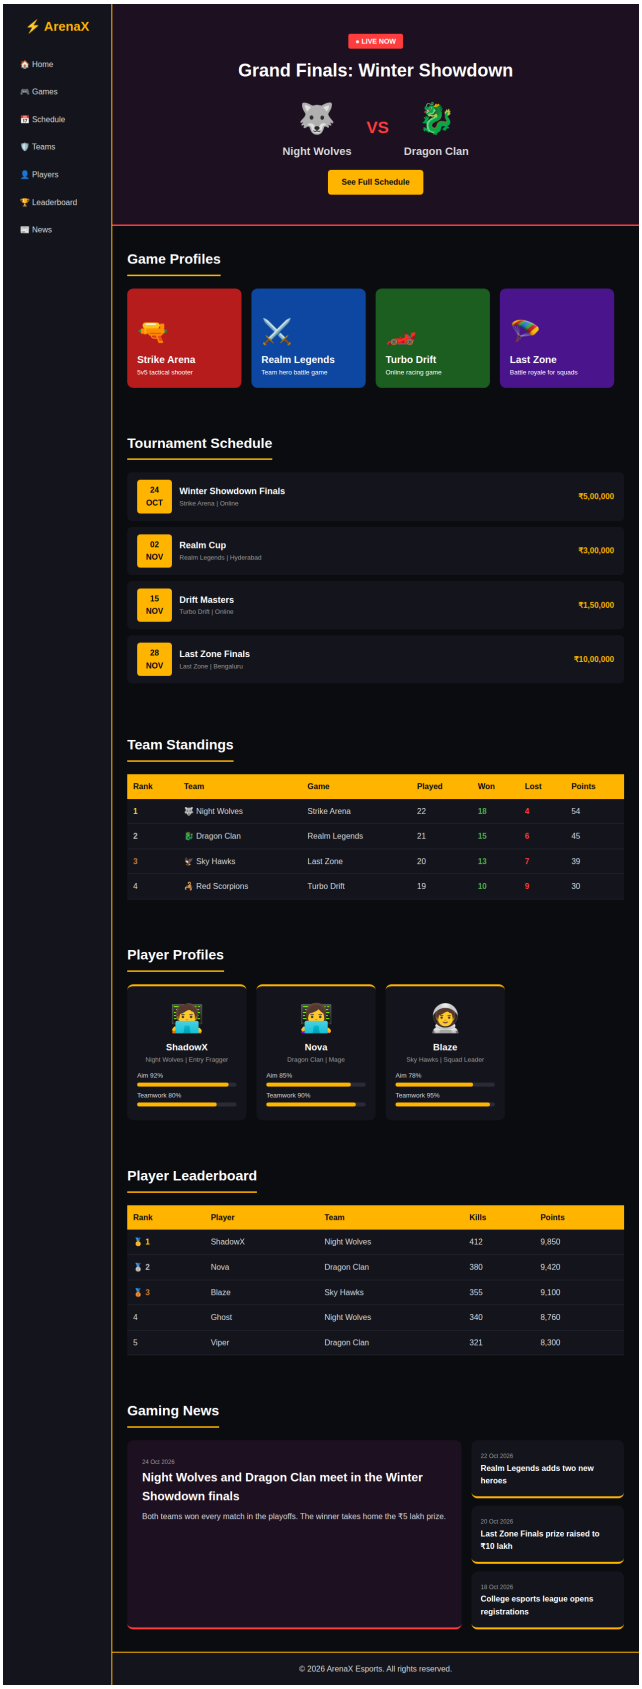

- Palette: orange `#ff6b00`, amber `#ff9f00`, page grey `#f1f3f6`, dark `#222`, offer green `#2e9e5b`.
- The navbar has `position: sticky; z-index: 10` so it stays above the cards while scrolling.
- At 600 px and below the nav is centred, the search box becomes full width and each product card fills the row.

Limitations

- This is a visual prototype: search, wishlist, cart and the buttons do nothing because there is no JavaScript or backend.
- Discount percentages and prices are typed in by hand; a data-driven version would calculate them.
- The category pills and Wishlist/Cart links point to # and only scroll to the top.

4. ArenaX Esports Website

File: gaming_website.html **Purpose:** A tournament hub for a fictional esports organisation, showing a live final, game profiles, schedule, standings, player stats, a leaderboard and news.

Full page at 1280 px width

Page structure

Section	ID	Content
Sidebar	-	Fixed 220 px panel with the ArenaX logo and 7 links; gold border on the right
Live banner	#home	"LIVE NOW" tag, Grand Finals: Winter Showdown, Night Wolves vs Dragon Clan
Game Profiles	#games	Strike Arena, Realm Legends, Turbo Drift, Last Zone (red, blue, green, purple cards)
Tournament Schedule	#schedule	Four events with date box, venue and prize
Team Standings	#teams	Table of four teams with played, won, lost and points
Player Profiles	#players	ShadowX, Nova and Blaze with Aim and Teamwork bars
Player Leaderboard	#leaderboard	Top five players by points
Gaming News	#news	One featured story and three short items
Footer	-	Copyright line

Data shown on the page

Date	Event	Game	Venue	Prize
24 Oct	Winter Showdown Finals	Strike Arena	Online	Rs. 5,00,000
02 Nov	Realm Cup	Realm Legends	Hyderabad	Rs. 3,00,000
15 Nov	Drift Masters	Turbo Drift	Online	Rs. 1,50,000
28 Nov	Last Zone Finals	Last Zone	Bengaluru	Rs. 10,00,000

Rank	Team	Game	Played	Won	Lost	Points
1	Night Wolves	Strike Arena	22	18	4	54
2	Dragon Clan	Realm Legends	21	15	6	45
3	Sky Hawks	Last Zone	20	13	7	39
4	Red Scorpions	Turbo Drift	19	10	9	30

Design notes

- Palette: near-black `#0b0c10`, panels `#14151c`, gold `#ffb400`, live red `#ff3d3d`. Typeface: Verdana.
- The content area uses `margin-left: 220px` to make room for the fixed sidebar.
- Tables sit inside an `overflow-x: auto` wrapper so they scroll sideways on phones instead of breaking the layout.
- Rank cells are coloured gold, silver and bronze; wins are green and losses red.
- At 800 px and below the sidebar becomes a normal block at the top of the page with inline links, and cards go full width.

Notes

- The schedule lists the Winter Showdown Finals on 24 Oct, matching the "live now" banner and the news item dated 24 Oct 2026.
- The Teams link in the sidebar jumps to the standings table. There are no separate team pages.
- All names, teams and prize amounts are fictional sample data.

5. Running and Editing the Sites

- Keep each HTML file as it is and open it in any modern browser (Chrome, Edge, Firefox, Safari).
- Edit with any text editor (VS Code recommended). Use the Live Server extension to refresh automatically after saving.
- To publish for free, upload the files to GitHub Pages, Netlify or Vercel. Rename the main page to `index.html` for the site root.

Browser testing used for the screenshots

Item	Value
Engine	Chromium (headless)
Desktop viewport	1280 x 800 px
Mobile viewport	390 px wide
Animations	Allowed to finish (3.5 s) before capture

Improvement ideas (all three sites)

- Add a `:focus-visible` style on links and buttons for keyboard users.
- Add `prefers-reduced-motion` rules to turn off bouncing, blinking and pulsing for users who are sensitive to motion.
- Add `scroll-margin-top` to sections so sticky navigation does not cover headings after an anchor jump.
- Add meta description tags and real images with `alt` text for better search and accessibility.
- Add a small amount of JavaScript for working carts, search and a mobile menu if the sites are to be used for real.
